Founder & Software Development Consultant with 15+ years of experience designing, developing, and supporting enterprise software systems, web applications, database solutions, and business automation tools. Experienced in software architecture, full-stack development, system integration, application server administration, and technical instruction. Founder of all9s Solutions LLC, providing custom software development, web application development, database solutions, and technology consulting services. Proven ability to lead projects, mentor developers, and deliver scalable solutions that solve real business challenges.

TECHNICAL SKILLS

Languages	Java, JavaScript, TypeScript, Python, SQL, PHP, HTML5, CSS3, Bash
Frameworks & Libraries	Spring Boot, Spring Framework, Hibernate, Spring Data JPA, Next.js, React, Angular, Flask, SQLAlchemy, Bootstrap, Tailwind CSS, Thymeleaf, Jinja
Databases	PostgreSQL, Microsoft SQL Server, MySQL, DB2 LUW, DB2/AS400, Derby
Platforms & Technologies	Jakarta EE (J2EE), REST APIs, Git, GitHub, CVS, Linux, WebSphere, WildFly, Tomcat, GlassFish
Professional Expertise	Software Architecture, Full-Stack Development, Database Design, System Integration, Technical Instruction, Curriculum Development, Business Automation, Technical Leadership

PROFESSIONAL EXPERIENCE

Founder & Software Development Consultant 2026 - Present
all9s Solutions LLC

Founded and operate a software development and technology consulting company providing custom software development, web application development, database solutions, system integration, and business automation services.

- Design and develop custom software solutions tailored to client requirements.
- Build responsive web applications, client portals, and business management systems.
- Design and implement relational database solutions and data-driven applications.
- Integrate third-party services, APIs, payment systems, and cloud-hosted platforms.
- Provide technical consulting, solution architecture, and software modernization guidance.
- Manage the complete software development lifecycle from discovery and planning through deployment and support.

Software Development Instructor & Curriculum Developer 2018 - 2026
LaunchCode & Unlocked Labs

Provided software development instruction and curriculum support through federally and state-funded technology training programs.

- Delivered instruction in Java, JavaScript, TypeScript, Python, SQL, HTML5, and CSS3.
- Taught modern development frameworks and technologies including Spring Boot, Spring Data JPA, Angular, Flask, SQLAlchemy, Bootstrap, Thymeleaf, Jinja, and Node.js.
- Developed and enhanced technical curriculum, training materials, and hands-on programming exercises.
- Designed and developed Digital Literacy and Digital Citizenship curriculum focused on technology adoption, responsible online engagement, workplace readiness, and student success.
- Mentored students in software development practices, problem-solving techniques, and professional growth.

Senior Software Developer 2010 - 2022
Missouri Department of Corrections

Designed, developed, and maintained enterprise software systems supporting statewide correctional operations, administrative functions, and law enforcement partners.

- Led development efforts for large-scale enterprise applications, automated processes, web applications, command-line tools, and desktop systems.
- Collaborated with project managers, business analysts, contractors, vendors, and stakeholders to translate business requirements into effective technical solutions.
- Designed and implemented software architecture, database structures, system integrations, and application enhancements.
- Produced technical documentation, user guides, video tutorials, and training materials for technical and non-technical audiences.
- Provided mentoring and technical guidance to development staff and served as a Java instructor for newly hired programmers.
- Supported the full software development lifecycle, including requirements analysis, design, development, testing, deployment, and maintenance.

PROJECTS

Keith

Automated Process Framework

Designed and developed an extensible Java application framework that standardized common development patterns, automated repetitive tasks, and provided reusable components for enterprise software projects. The framework reduced development effort by more than 50%, improved consistency across applications, and simplified long-term maintenance and enhancement activities.

Technologies: Java

Repository: [GitHub](#) | [Landing Page](#)

Eclipse Plug-ins

Open Source

Developed custom Eclipse IDE extensions that streamlined day-to-day development activities, improved workflow efficiency, and supported adherence to established coding standards. By embedding productivity tools directly into the development environment, the plug-ins reduced repetitive work, improved team consistency, and accelerated project delivery.

Technologies: Java, Eclipse RCP, SWT

Corner Dogs Ordering System

Portfolio Project | Jakarta EE

Created a portfolio web application modeling a fictional quick-service restaurant, Corner Dogs, to demonstrate full-stack web development concepts and user workflow design. The application implements a guided multi-step data collection process utilizing session management, validation, and reusable presentation components to deliver a streamlined user experience.

Technologies: Jakarta EE, JSP, Servlets, Custom Tags
