Java Developer with 15+ years of experience designing, developing, supporting, and maintaining enterprise applications across government, education, nonprofit, and independent software environments. Strong background in Java application development, backend systems, relational databases, system integration, production support, and the complete software development lifecycle.

Proven ability to translate business requirements into maintainable software, solve complex technical problems, mentor developers, support production systems, and deliver reliable applications that address real operational needs.

TECHNICAL SKILLS

Java & Enterprise Development	Java, J2EE, Jakarta EE, EJB, JPA, JSP, Servlets, JDBC, JMS, JAAS, Spring Framework, Spring Boot, Spring Data JPA, Hibernate, Apache Struts, Thymeleaf, JUnit
APIs & Backend Development	REST APIs, System Integration, XML, XSLT, JSTL, LDAP, Active Directory, JNDI, Apache Commons, Log4j, SLF4J, Relational Database Design, Business Automation, Application Architecture
Databases	PostgreSQL, Microsoft SQL Server, MySQL, DB2 LUW, DB2/AS400, Derby, SQL
Additional Languages & Web Technologies	TypeScript, JavaScript, Python, PHP, HTML5, CSS3, Bash, Next.js, React, Angular, Flask, SQLAlchemy, Bootstrap, Tailwind CSS, Jinja
Platforms & Application Servers	Windows, Linux, Apache Tomcat, IBM WebSphere, JBoss AS, WildFly, GlassFish
Development Tools & Practices	Eclipse, IntelliJ IDEA, NetBeans, Visual Studio Code, Cursor, Codex, Git, GitHub, CVS, Full Software Development Lifecycle, Production Support, Debugging, Technical Leadership, Technical Instruction, Curriculum Development

PROFESSIONAL EXPERIENCE

Independent Java Developer

all9s Solutions LLC

2026 – Present

Independent software development laboratory focused on building Java applications, reusable frameworks, developer tools, business systems, open-source software, and selected client solutions. Combines contract development with experimental projects created to explore technologies, improve engineering practices, and produce reusable software components.

- Design and develop Java-based applications, backend services, and business systems using Spring Boot, Spring Framework, Hibernate, Jakarta EE, PostgreSQL, and REST APIs.
- Build reusable Java frameworks, Eclipse plug-ins, developer productivity tools, and open-source software components.
- Design relational data models, application architectures, and maintainable integration solutions.
- Integrate third-party APIs, payment platforms, authentication services, and cloud-hosted applications.
- Deliver selected contract projects from requirements analysis and planning through development, testing, deployment, and support.
- Build experimental software projects to evaluate new technologies and improve development practices.

Software Development Instructor & Curriculum Developer

Unlocked Labs

2024 – 2026

Developed curriculum and delivered software engineering instruction for technology education programs preparing students for modern software development work.

- Delivered instruction in Java, Spring Boot, Spring Data JPA, Thymeleaf, JUnit, JavaScript, TypeScript, Angular, Node.js, SQL, Git, Bash, HTML5, CSS3, and Bootstrap 5.
- Designed and maintained software development curriculum, technical exercises, coding assignments, and instructional materials.
- Developed Digital Literacy and Digital Citizenship curriculum supporting workplace readiness, responsible technology use, and successful technology adoption.
- Mentored students in application development, debugging, testing, software design, problem-solving, and professional development practices.
- Collaborated with instructional staff to improve curriculum quality, technical consistency, and student outcomes.

Software Development Instructor

LaunchCode

2018 – 2024

Delivered hands-on software development instruction through LaunchCode training programs, preparing students for entry-level software engineering careers.

- Taught Java, Spring Boot, Spring Data JPA, Thymeleaf, JUnit, Python, Flask, SQLAlchemy, Jinja, SQL, Git, Bash, HTML5, CSS3, and Bootstrap 4.
- Developed programming exercises and guided projects emphasizing object-oriented design, backend development, relational databases, and web application fundamentals.
- Guided students through testing, debugging, version control, application design, and professional software development practices.
- Provided individual mentoring focused on technical problem-solving, code quality, confidence, and career readiness.

Senior Software Developer

Missouri Department of Corrections

2010 – 2022

Designed, developed, maintained, and supported enterprise Java and J2EE applications serving statewide correctional operations, administrative systems, and law enforcement partners. Worked across the complete software development lifecycle, delivering and supporting production systems that integrated complex business processes, enterprise databases, application servers, and external services.

- Designed, developed, and maintained enterprise Java and J2EE applications supporting offender management, case management, reporting, scheduling, administrative business functions, financial systems, automated processes, and law enforcement partners across the State of Missouri.
- Built and enhanced enterprise applications using Java, J2EE, Apache Struts, Spring Framework, Hibernate, SQL, Microsoft SQL Server, DB2 for i (DB2/400), and DB2 LUW.
- Developed system integrations, implemented XML and XSLT transformations, and automated application builds and deployment processes using Apache Ant.
- Deployed, configured, and supported applications on Apache Tomcat, IBM WebSphere, JBoss AS, and WildFly application servers.
- Supported production systems through debugging, troubleshooting, defect resolution, performance analysis, maintenance, and long-term application enhancement.
- Collaborated with project managers, business analysts, contractors, vendors, and operational stakeholders throughout requirements analysis, application design, development, testing, deployment, and ongoing support.
- Produced technical documentation, user guides, developer documentation, and training materials for technical and non-technical audiences.
- Mentored software developers, provided technical leadership, and instructed newly hired programmers in enterprise Java development practices, application architecture, and software engineering standards.
- Used Eclipse, NetBeans, and IntelliJ IDEA for application development, debugging, maintenance, and technical instruction.

CERTIFICATES

Software Development Instructor Certificates — LaunchCode (2)

Software Development Instructor Certificates — Unlocked Labs (5)

PROJECTS

Keith

Automated Process Framework

Java application framework created to standardize recurring development patterns, automate repetitive tasks, and provide reusable components for enterprise software projects. Reduced development effort by more than 50%, improved consistency across applications, and simplified long-term maintenance and enhancement.

Technologies: Java

Repository: [GitHub](#) | [Landing Page](#)

Eclipse Plug-ins

Open Source

Open-source Eclipse IDE extensions created to streamline development workflows, reduce repetitive work, and support consistent coding practices. Integrated productivity tools directly into the developer environment to improve efficiency and accelerate routine development tasks.

Technologies: Java, Eclipse RCP, SWT

Repository: [GitHub](#) | [Landing Page](#)

Corner Dogs Ordering System

Portfolio Project | Jakarta EE

Jakarta EE portfolio application modeling a multi-step restaurant ordering workflow. Demonstrates session management, input validation, reusable presentation components, JSP, Servlets, and custom tags in a structured web application.

Technologies: Jakarta EE, JSP, Servlets, Custom Tags
